LE PHUC DUC

Ho Chi Minh City, Vietnam | (+84) 373304824 | `lephucduc2000@gmail.com` | `LinkedIn` | `Online CV`

SKILLS

Programming language**: C, C++, Batch script, Python, CAPL
Automotive industrial**: AUTOSAR Classic, CAN protocol, LIN protocol
Tools**: ALM, Vector toolchain (CANoe, VectorCAST, Davinci Configurator & Developer)

EDUCATION

Ho Chi Minh City University of Technology, Ho Chi Minh City** | **2024 – Present**
Master's Degree in Computer Science Engineering*
GPA: 7.6/10
Ho Chi Minh City University of Technology, Ho Chi Minh City** | **2018 – 2022**
Bachelor's Degree in Automation and Control Engineering*
GPA:

WORK EXPERIENCE

Bosch Global Software Technologies Company Limited** | Ho Chi Minh City, Vietnam
Bosch Global Software Technologies Vietnam is a subsidiary of Bosch Global, focusing on Automotive Embedded Systems. Developing Airbag systems, our goal is to save lives which requires a great attention to detail and the highest standard of safety in embedded systems.*
Product**: Perfectly Keyless System
Customer**: Honda**Software Engineering** | **Feb 2024 – Present**

1. Responsible for Software Developer in Master ECU software development with SaaP approach.

   - Proficient in configuring AUTOSAR Basic software, including CommStack, MemStack, CryptoStack and SystemStack.
   - Proficient in developing AUTOSAR Application software components and RTE configuration.
   - Creating the platform software to integrate Master Mcu SaaP product.
     – Support to integrate new SIP from Vector.
   - Experienced in Cybersecurity concept in software development.

2. Support for DevOps activities in project.

   - Setup infrastructure, develop and maintain CI/CT pipeline for project.
   - Building the framework for clear, functional C document using Doxygen + Sphinx.

3. Responsible for Software Developer in **SDV program**.

   - Define approach, architecture and technologies used for internal SDV program.
   - Collaborate with ETAS to bring up PK's features into DreamKit.
   - Bring up features from Master Mcu's SaaP to SDV internal platform (Diagnostic, Ranging/Localization).
   - Experienced in developing and debugging softwares in Linux environment.
   - Building the pipeline and document framework for SDV.

   Achievement**

- Acknowledged for contributing to software delivery for Japan customer (Honda, ALAP) for 2 consecutive releases.
- Successfully building a platform software to integrate SaaP product which contributed to the validating process of both VnV and Developer team.
- Acknowledged for successfully bring up features from PK to SDV platform.
  Product**: Perfectly Keyless System for Fleet Management Extended Access.
  Customer**: CV (Commercial Vehicle)

Software Engineer | **June 2022 – Feb 2024**

1. Responsible for Software Developer in Master ECU for Perfectly Keyless System's platform project.

   - Configuring AUTOSAR Application software components and RTE configuration.
   - Support to integrate new SIP from Vector and support to debug problem in SIP package.
   - Understanding CCC (Car Connectivity Consortium).

2. Proficient in developing Application software components and configuring Basic software for Airbag product

3. Establised CI/CT pipeline for project (integrating build process, unit test upto system test and reporting).

4. Responsible for developing door lock/unlock feature for Master Mcu using LIN.
   Achievement**

- Acknowledged for establishing and maintaining CI/CT pipeline and share for other teams.
